

MICROCENTRIFUGE TUBES

ClickSeal™ Tubes

Research Grade MicroCentrifuge Tubes

Increased volumes of **0.65ml**, **1.7ml** and **2.0ml**, yet fit all popular microcentrifuge rotors. Writing surface on flat cap and side wall for quick sample ID. Unique side-gated mold design eliminates risk of glove or finger puncture caused by sharp bottom-gate protrusions on other tubes. Superior clarity and external graduations ensure accurate, reproducible lab results. Target syringe port is easily pierced for spill-free handling of hazardous substances. With-stands temperatures from +121C to -80C and an RCF of 17,000xg. Positive ClickSeal™ design allows repeated cap closures and eliminates pressure induced popping of caps during incubation. All tubes available in natural polypropylene, in RainbowPacks of five transparent colors, or as packs of a single color. Five bright fluorescent color tubes are offered in **0.65ml**, **1.7ml** and **2.0ml** sizes. Tubes are also bagged and radiation sterilized in small RadPacks™. **Available in the following colors: Natural, Red, Yellow, Green, Violet.**

SlickSeal™ Tubes

Pre-Lubricated MicroCentrifuge Tubes

Pre-lubricated microcentrifuge tubes simplify research procedures requiring a low adhesion surface. Ensures optimal sample yield during micro-volume sequencing procedures. Ideal for custom gene libraries, protein work, cDNA synthesis, and nucleic acid amplification. Pre-lubricated SlickSeal tubes incorporate standard ClickSeal design features and packaging options, tubes are offered in **0.65ml, 1.7ml, and 2.0ml** sizes. **Available in the following colors: Natural, Red, Yellow, Green, Violet.**
